Professional Summary

Full Stack Developer with hands-on experience building scalable enterprise applications using MERN and MEAN stacks. Improved backend API performance by 70%+, implemented RBAC-based security systems, and developed AI-powered applications leveraging Gemini AI. Strong foundation in DSA with 300+ LeetCode problems solved.

Professional Experience

InnCircles

July 2025 – Present

Software Developer Intern

Onsite

- Engineered production-level backend systems using MEAN and MERN stacks, designing database models and implementing complex workflows for an enterprise construction management platform serving 1000+ users.
- Optimized API performance by developing efficient Excel data processing pipelines, reducing response times from approximately 20 seconds to 5–6 seconds and improving throughput by 70–75%.
- Authored 25+ unit test cases using JUnit, increasing code coverage across critical service modules and ensuring the correctness and reliability of API logic in production environments.
- Implemented Role-Based Access Control (RBAC) across 3 user roles to manage permissions and restrict module access based on assigned responsibilities, strengthening platform security and authorization management.
- Collaborated within a 50-member agile development team using Jira and Bitbucket for sprint planning, task tracking, code reviews, and version-controlled software development.

Projects

BatBazaar | MERN Stack (MongoDB, Express, React, Node.js, Razorpay, Cloudinary, Gemini AI)

- Built and deployed a full-stack e-commerce platform with 15+ REST APIs, Razorpay payment integration, real-time inventory tracking, order management, and role-based functionalities for customers and administrators.
- Integrated a Google Gemini AI-powered chatbot to provide natural language cricket bat recommendations and dynamically apply product filters across 50+ products through a conversational interface.
- Designed and implemented a 5+ module Admin Dashboard for inventory management, stock updates, order tracking, and delivery status monitoring to streamline operational workflows.

Helper Management System | MEAN Stack (MongoDB, Express, Angular, Node.js)

- Developed a full-stack helper management system featuring CRUD operations, role-based workflows, and 10+ REST APIs, demonstrating end-to-end ownership across frontend and backend development.
- Integrated dynamic QR code generation to enable instant access to helper profiles through QR scanning, while implementing form-based data handling and validation for improved data accuracy.

Technical Skills

Languages: Java, Python, C, HTML/CSS, JavaScript

Frameworks/Libraries: React, Express, Angular, Node.js

Developer Tools: Git, Jira, Bitbucket, VS Code, IntelliJ IDEA

Databases: MongoDB, SQL

Core Concepts: Data Structures & Algorithms, REST APIs, RBAC, Unit Testing, Agile Methodology

Education

Anil Neerukonda Institute of Technology And Sciences

B.Tech, Computer Science & Engineering (CSE) — CGPA: 9.32/10

Sri Chaitanya Junior College

Intermediate M.P.C - 97 %

Tagarapuvalasa, Vishakapatnam

Oct 2022 – April 2026

Marikavalasa, Vishakapatnam

June 2020 – May 2022

Achievements and Certifications

LeetCode: Solved 300+ problems covering data structures, algorithms

NPTEL: Programming in Java
